Tracklr - Command-line Productivity Toolset

Date	Summary	Hours
2019-02-09	Worked on initial version of https://gitlab.com/markuz/tracklr v0.1.0	4.0
2019-02-15	Testing tracklr v0.1 with Ivan and Tomas v0.1.0	0.5
2019-02-15	* fixed timesheet sorting * fixed possible missing description/summary in ical feeds * refactored logging * started on v0.2 ie. multi calendar support v0.2.0	2.0
2019-02-19	v0.2 - support of mutliple calendars v0.2.0	1.0
2019-02-20	worked on multi-calendar support v0.2.0	0.5
2019-02-21	v0.3 - finished off implementation to support multiple calendars v0.3.0	1.0
2019-02-22	v0.3 tidy ups v0.3.0	1.0
2019-02-22	v0.4 added ``tracklr init {config,template}`` command for easy custom configuration of tracklr v0.4.0	2.0
2019-02-23	v0.5: * added ``tracklr show`` command that displays configuration * made configuration simpler * expanded documentation v0.5.0	2.0
2019-03-01	v0.6.0	1.0
2019-03-01	v0.6 v0.6.0	1.0
2019-03-29 - 2019-03-30	* put down old tracklr.com and replaced it with the latest version of the documentation* refactored the code base so that it is more generic (no more client, project, tag) include and exclude patterns * tracklr pdf --report {ls, tag} can be now used to choose between ls and tag report in pdf format * exclude patterns now can be used for filtering * new internal pdf report * documentation updates v0.7.0	6.0
2019-05-03	v0.8.0 (May the Force be with you) * added support for X-WR-TIMEZONE - thanks William Buick for the report and the patch * switched to semantic versioning (https://semver.org/) and started naming the releases v0.8.0	2.0
2019-06-04	Added parsed tags into report_html so that it can be used in PDF reports. This is so that reported items contain work summary but also tags from title which does not get displayed on the internal PDF report template. v0.9.0	1.0
2019-06-10	fixed typo in readme; updated pdf to add br tag only if there is event description before the tags v0.9.1	0.5

2019-06-10	* split report generation into separate make command * updated get_tags so that it uses untagged tag for hours that were not tagged and should more than one tag be used per event the hours are then split evenly between the tags v0.9.2	1.0
2019-07-26	* fix for event filter; abort filtering if there is no summary info in event * reworded last release changelog notes * documentation updates v0.9.3	0.5
2019-08-16	* updated documentation and released v0.9.3 v0.9.3	2.0
2019-11-20	* added Number of events to ls log info output v0.9.4	1.0
2019-12-24	* configuration can be now also stored in .tracklr.yml file * added tracklr banner and version number to show command * documented addition of images to HTML templates for PDF reports v0.9.5	2.0
2019-12-25	* started code refactoring to handle vdir feeds v1.0.0	2.0
2019-12-26	* added vdir support using `Khal's`_ ``Vdir`` class. * **DEPRECATED** ``url`` option in the config. Use ``location`` for either URLs or vdir paths. * **DEPRECATED** ``x_wr_timezone`` option in the config. Use ``timezone`` and either set it to ``True`` for ``X-WR-TIMEZONE`` feeds (eg. Google Calendar), or specify your feed's timzone manually. Eg. ``Pacific/Auckland``. v1.0.0	2.0
2019-12-30	* changed vdir location handling so that ~/ is expanded to full path ie. ~/.calendars/... locations can now be used in the config * added handler for when the given location of vdir does not exist v1.0.1	2.0
2019-12-31	* changed package classifiers and added ``tracklr v1.0.1`` to pypi * added simple vdir object that provides list and get functions ie. removed dependency on ``khal`` v1.1.0	2.0
2020-01-01	Tracklr v1.1.0 * ``show`` command is now ``info`` * all commands now use new tracklr info banner Tracklr v1.1.1 * removed dependency on pyfiglet * fixed vdir not found exception handling * fixed Info command * fixed entrypoint for the new info command v1.1.1	2.0
2020-01-01	* fixed make report command * fixed title retrieval for pdf command * updated PDF report for docs v1.1.2	1.0
2020-01-04	* split Tracklr's get_parser to get_base_parser so that init and info commands can use --kalendar, --title and --subtitle args only ie. base args shared among all commands. This also fixes init command not working. v1.1.3	2.0

2020-01-04	* Added ability to specify html template file for pdf reports so that other than pdf.html templates can be used. v1.2.0	2.0
2020-01-05	* DEPRECATED tag command. * NEW group command allows to group by any key defaulting to `#` ie. by default group command provides the same behaviour as the old tag command. v1.3.0	2.0
2020-01-05	* Changed pdf command implementation from tag to group. * Replace _ with space in default PDF HTML template. * Updated tracking docs. v1.3.1	1.0
2020-04-15	* added better implementation of -g --group parameter; no default applied when group arg is not present; if the parsed group matches are number add those up to total_sum v1.4.0	1.0
2020-04-15	* changed group command to use # as its default group when a group argument is not supplied; display name of the group when it is one of the common_groups * changed ls command to show total sum if its value is more than 0.0; display group column when group is specified and display name of the group when it is one of the common_groups v1.4.0	2.0
2020-04-30	* change default group for pdf command to be # ie. retain previous default behaviour * changed default pdf template to generate list of found group matches * return found group matches consistently as a list not as a list or a string v1.4.1 TEST	1.0
2020-04-30	v1.4.2	1.17
2020-05-07	* Removed Python 2 support * Removed support for deprecated old location and timezone handlers * Added tests and got to 51% test coverage v1.5.0	4.0
2020-05-19	* Finished off 1.5.0 and tidied it up in v1.5.1 and v1.5.2 v1.5.0 v1.5.1 v1.5.2	2.0
2021-04-23	* Removed custom logging and added more tests * Finished off first full version of ls REST API view * Added back wsgi.py for development of tracklr rest api * Added docstrings into manage, settings and urls * Reorganized tracklr rest api files * Removed unused tracklr rest api projects files; Updated docs; Ignored .tracklr.yml and db.sqlite3 files; Added ls REST API endpoint and openapi spec url endpoints * Updated development docs * Tidy up changelog v1.5.3	2.0
2022-04-20	* Tidy up release v1.5.4	2.0
Total		**65.17**
